Client-Side Developer Exam

The following project must be in Angular 2 CLI environment or above

1. At your current project – you need to create web application that presents the grid table with data provided in JSON below.
   When field value not exist – present empty cell in table.

   *It can be simple as possible.

2. The user should have ability to **Edit** field in a row (except of the ID field).

   *All table fields are text, edit can be done with text box.

3. The user should have ability to **Add/Delete** row.

4. Table data loading and manipulation should be done using http client API.

   *It is necessary to provide http mocking infrastructure that simulates server side.

   use http interceptor.

Good Luck!
